

UNM

*Department of Chemistry
& Chemical Biology*

Standard Operating Procedure

PARTICULARLY HAZARDOUS SUBSTANCES (PHS)

General:

The Occupational Safety and Health Administration (OSHA) Laboratory Standard requires that special handling procedures be employed for certain chemicals identified as “particularly hazardous substances.” Particularly hazardous substances include chemicals that are “select carcinogens, reproductive toxins, and chemicals that have a high degree of acute toxicity.” In addition, many chemicals used (including novel chemicals that are synthesized) in research laboratories have not been tested explicitly for carcinogenic or toxic properties and should therefore be handled as “particularly hazardous substances” since their hazards are unknown.

It should be noted that Chemical and Chemistry Biology will only enforce the OSHA enforceable PHSs. The rest of the material is for information only.

This SOP identifies Procedures and PPE needs for use of PARTICULARLY HAZARDOUS SUBSTANCES:

A. Definitions:

1. Carcinogen:

A substance that either causes cancer in humans or, because it causes cancer in animals, is considered capable of causing cancer in humans. OSHA defines those substances that are known to pose the greatest carcinogenic hazards as “select carcinogens” (see Appendix B). These materials include substances that:

- OSHA regulates as a carcinogen; or
- The National Toxicology Program (NTP) lists as “known to be a carcinogen” or “reasonably anticipated to be a carcinogen” in their Annual Report on Carcinogens; or
- The International Agency for Research on Cancer (IARC) lists under Group 1 (“carcinogenic to humans”), Group 2A (“probably carcinogenic to humans”), or Group 2B (“possibly carcinogenic to humans”).

2. Reproductive Toxin

- A substance that causes chromosomal damage or genetic alterations (mutagens) or substances that cause lethal or physical malformations or defects in a developing fetus or embryo (teratogens).

3. Chemicals with a High Degree of Acute Toxicity

- Acute toxicity is the ability of a chemical to cause a harmful effect rapidly after a single short term exposure. Acutely toxic chemicals can cause local toxic effects, systemic effects, or both. OSHA's "chemicals with a high degree of acute toxicity" includes both "highly toxic" and "toxic" chemicals that "may be fatal or cause damage to target organs as a result of a single exposure or exposures of short duration" (i.e., acutely toxic effects) as defined in [29 CFR 1910.1200, Appendix A](#) (Mandatory). Combining the definitions from 29 CFR 1910.1200, Appendix A, yields the following table:;

Note: The lethal dose (LD50) is the dose (in mg/kg of body weight) and the lethal concentration (LC50) is the concentration in air (in ppm) at which 50% of the test subjects expire.

- In general, "chemicals with a high degree of acute toxicity" include 1) "highly toxic" chemicals that have an Oral LD50 of ≤50 mg/kg (rats), Skin Contact LD50 of ≤200 mg/kg (rabbits), Inhalation LC50 of ≤200 ppm (rats for 1 hour) and 2) "toxic" chemicals with acutely toxic effects or those that have an Inhalation LC50 of ≤2000 ppm (rats for 1 hour).
- Comparing the former OSHA definition to the Globally Harmonized System (GHS) of chemical classification and labeling, the GHS acute toxicity ratings of 1 and 2 account for the old OSHA "highly toxic" categories and the "toxic" inhalation category. Therefore, the GHS acute toxicity ratings of 1 and 2 can be used as to determine the laboratory chemicals that are considered "chemicals with a high degree of acute toxicity" and as such, "particularly hazardous substances."
- Please refer to the attached Appendix

B. Eye Protection

1. Please review individual Safety Data Sheets (SDS) for appropriate eye protection
2. If using flammable materials that does not Ultra-Violent, or Lasers, then Chemical Safety Goggles should be used. Prescription goggles are approved.
 - i. Prescription goggles cannot be paid for by unrestricted indexes
 - ii. If Prescription goggles are paid for by UNM, then these must be returned to the department and cannot leave the campus
 - iii. Individual can pay for or compensate the UNM for the previously purchased goggles.

Task	Eyewear Type	Location
<i>fill in task information.</i>	<i>Examples follow: Fill in eyewear type(s). (example included)</i>	<i>Fill in location where PPE is available.</i>
<i>Use of PARTICULARLY HAZARDOUS SUBSTANCES</i>	<i>Safety goggles</i>	<i>Laboratory</i>

C. Gloves

1. Nitrile gloves are approved for most acids
 - i. Causal handling
 - ii. Delineated by SDS
2. Refer to SDS if there is another type of glove
 - i. Delineated by SDS
 - ii. For use when full procedure is being performed
3. Hydrofluoric Acid required the use of nitrile and Silver Shield

Task	Glove Type	Location
<i>fill in task information.</i>	<i>Examples follow: Fill in glove type(s). (example included)</i>	<i>Fill in location where PPE is available.</i>
<i>Use of PARTICULARLY HAZARDOUS SUBSTANCES</i>	<i>Safety goggles</i>	<i>Laboratory</i>

D. Footwear

1. No sandals or open-toed shoes are to be worn by employees entering lab facilities. Shoes should have non skid soles and should have a reasonable heel height.
2. Safety shoes must be worn if there is potential for injury from heavy objects (e.g., handling drums, cylinders). The PI is responsible for procuring safety shoes if they are determined necessary.
3. Safety shoes must meet the requirements of ANSI Z41 (latest issue).

E. Clothing

1. Laboratory coats or other suitable work apparel shall be worn by laboratory employees whenever there is potential for chemical exposure in the work area.
2. If large amounts of highly flammable materials Flame Resistant (FR) lab coats are recommended.
3. Clothing must be cleaned regularly. If a spill occurs on the clothing, it must be decontaminated before reuse. Lab clothing should not be washed with other household clothing.
4. Disposable clothing should be considered when working with highly toxic materials, carcinogens, mutagens, or teratogens. The LS/PI is responsible for determining the need for disposable clothing.
5. Before each use, clothing is to be inspected for damage, deterioration, contamination. If deficiencies are noted, the clothing should be cleaned, repaired, or replaced before use.
6. Shorts will not be worn in the laboratory.

E. Hearing Protection

1. Hearing protection (earmuffs or plugs) is required whenever employees are exposed to noise levels of 85 decibels or greater as an 8-hour time weighted average (TW A). Industrial Hygiene workers exposed to noise levels in excess of 90 dBA will wear hearing protection regardless of the duration.
2. Hearing protection is to be inspected before each use , for tears and contamination. If deficiencies are noted, the hearing protector should be cleaned, repaired, or replaced before use.
3. Annual audiogram and other requirements of the SRS Hearing Conservation Program apply if full-shift noise exposures are 8 5 decibels or greater. Please contact SRS for this program.

F. Respirators

1. Respiratory protection is not required for any routine work conducted in the laboratory.
2. Staff that are responsible for assessing chemical spill sites must ensure that they and other responders have respirators capable of controlling the particular chemical species and concentration. Emergency conditions (i.e., airborne contaminants in excess of established Immediately Dangerous to Life and Health concentrations) are to be handled by emergency response personnel.
3. All employees issued respirators for any reason must follow all the requirements set forth in the OSHA respirator protection program as EHS does not have one
4. Specific information concerning respirator capabilities, filter selection, IDLH concentrations, etc., is contained in the OSHA respiratory protection standard.

G. Storage

1. These materials must be stored in areas designated for "particularly hazardous substances."
2. Storage areas should be clearly marked with the appropriate hazard warning signs.
3. All containers of these materials (even if the material is in very small quantities such as 0.1%) must be clearly labeled with the chemical name or mixture components and should be labeled with the appropriate hazard warning information.
4. Chemical storage areas should be secure to avoid spills or broken containers.
5. Storage areas or laboratory rooms must be locked when laboratory personnel are away or not present.

H. Handling

1. Designated areas (e.g., fume hoods, glove boxes, lab benches, outside rooms) for material use must be established and the areas identified by signs or postings.
2. Containment devices such as fume hoods (if necessary) and personal protective equipment (e.g., gloves, lab coat, and eye protection) must be used when handling these hazardous substances.
3. Procedures for the safe use of the material and waste removal must be established prior to use.
4. Decontamination procedures must be developed in advance and strictly followed

5. Only laboratory personnel trained to work with these substances can perform the work, and always within the designated area. Prior approval is required by the Principal Investigator, Lab Manager or Lab Supervisor
6. Only the minimum quantity of the material should be used

I. Spill

1. Chemical spill kit must be located and stocked in each lab
2. Spill clean up procedure should follow EHS procedures.

J. Training:

1. Employees using PPE must be trained in proper selection, care and use. The PI is responsible for providing training for protective eyewear, footwear, gloves and clothing.
2. Users of respirators other than filtering face piece models must be trained annually by the SRS.
3. Users of hearing protection who are exposed to full-shift average noise levels over 85 dBA must be trained annually by the Department of Environmental Safety.
4. The PI is responsible for ensuring that respiratory protection and hearing conservation training are provided when employees have a demonstrated need for entry into these programs.

APPENDIX

LAB STANDARD LIST FOR PARTICULARLY HAZARDOUS SUBSTANCES

This list contains examples of chemicals that may be used. The list is not all-inclusive.

This appendix lists examples of Particularly Hazardous Substances (PHS) which are a special subset of OSHA Hazardous Chemicals. PHS include chemicals that are known or suspect carcinogens, reproductive toxins, and/or highly toxic materials. Before working with any PHS, ask your supervisor if additional protective work practices are needed. You may also contact the principal investigator, lab manager, lab safety coordinator, or EHS for assistance.

Further information on including suspect carcinogens in the definition of PHS and guidelines for protection are found in Section XXX of CCB's Chemical Hygiene Plan that university personnel can use as a guideline for complying with OSHA's Standard for Occupational Exposures to Hazardous Chemicals in Laboratories. Additional information is found the National Research Council's publication *Prudent Practices in the Laboratory* in the chapter entitled 'Working with Chemicals' that is available online from the National Academies Press [Prudent Practices Working with Chemicals](#).

Of interest are the ones classified under the OSHA and EPA listed in the table below. All chemicals should be reviewed, but are not necessarily within the regulation of the OSHA standard for enforcement.

Abbreviations Used in List Headings

CARC NTP - National Toxicology Program listed carcinogen - [National Toxicology Program](#)

K = known carcinogen S

= suspect carcinogen

CARC IARC - International Association for Research on Cancer listed carcinogen - [IARC](#)

1 = known human carcinogen 2A =

probable human carcinogen 2B =

possible human carcinogen

CARC OSHA - OSHA regulated carcinogen - [OSHA-regulated carcinogens](#)

X = regulated carcinogen

REPRO SHEP - Included in *Catalog of Teratogenic Agents*, T.H. Shepard, 6th Edition, Johns Hopkins Press, 1989

X = listed teratogen

REPRO CALIF - Listed by the State of California 'Safe Drinking Water Act, 1986'

http://www.oehha.ca.gov/prop65/prop65_list/Newlist.html

F = female reproductive hazard

M = male reproductive hazard

HTX - Highly toxic, included in EPA's list 'Acutely Toxic Hazardous Waste', P-listed waste <40 CFR 261.33>, or Included in OSHA's list of highly hazardous chemicals with a threshold ≤ 200 pounds <29 CFR 1910.119>.

Toluidine; o-	95-53-4	S	2B				
Toluol; see toluene							
Toxaphene; see chlorinated camphene						X	
Toxoplasmosis	NA				X		
Trans-2-[(dimethylamino)methylamino]-5-[2-(5-ni...	55738-54-0		2B				
Tremolite; asbestiform; see asbestos							
Treosulphan	299-75-2			1			
Triazolam	28911-01-5					X	
Trichloromethane; see chloroform							
Trichloromethanethiol	75-70-7						X
Trichlorophenol; 2, 4, 6	88-06-2	S					
Tricyclohexyltin hydroxide; see cyhexatin							
Tridymite; see silica							
Trilostane	13647-35-3					X	
Trimethadione	127-48-0				X	X	
Tris (1-aziridinyl) phosphine sulfide	52-24-4	S	1				
Tris (2;3-dibromopropyl) phosphate	126-72-7	S	2A				
Trp-P-1(3-amino-1,4-dimethyl-5H-pyrido[4,3-b]...	62450-06-0		2B				
Trp-P-2(3-amino-1-methyl-5H-pyrido[4,3-b]indole	62450-07-1		2B				
Trypan blue (commercial grade)	72-57-1		2B				
Ultraviolet Radiation; A,B,& C, including sunlamps	NA		2A				
Uracil mustard	66-75-1		2B			XFM	
Urethane	51-79-6	S	2B			X	
Urofollitropin	26995-91-5					X	
Valproate; see valproic acid							
Valproic acid	99-66-1				X	X	
Vanadium oxide V2O5	1314-62-1						X

SUBSTANCE	CAS #	CARC NTP	CARC IARC	CARC OSHA	REPRO SHEP	REPRO CALIF	HTX EPA
Venezuelan equine virus	NA				X		
Vinblastine sulfate	143-67-9					X	
Vincristine sulfate	2068-78-2					X	
Vinyl benzene; see stryrene							
Vinyl bromide	593-60-2		2A				
Vinyl chloride	75-01-4	K	1				
Vinyl cyanide; see acrylonitrile							
Vinyl cyclohexene diepoxyde; 4	106-87-6	S	2B				
Vinyl cyclohexene dioxide; see 4-vinyl cyclohex...							
Vinyl cyclohexene; 4	100-40-3		2B				
Warfarin	81-81-2					X	
Welding fumes	NA		2B				
Xylidene; 2, 6 see 2,6-dimethylaniline							
Zinc chromate	13530-65-9	K					
Zinc cyanide	557-21-1					X	
Zinc phosphide Zn3P2; when present at concentra...	1314-84-7					X	
Zinc; bis(dimethylcarbamodithioato-S;S')-;	137-30-4					X	
[(5-nitrofurylidine)amino]-2-imidazolidinone; 1	555-84-0		2B				
[4-(5-nitro-2-furyl)-2-thiazoly]acetamide; n	531-82-8		2B
